Investment Thesis

- **Pure-play exposure to the SDV re-platforming.** Vehicles are migrating from distributed ECUs to centralised, over-the-air-updatable architectures — the largest work package in automotive engineering today. Legacy OEMs allocate up to 30% of R&D to software against >50% for new entrants, a gap they cannot close internally. KPIT is the only listed Indian player with ~100% automotive exposure and a chip-to-cloud stack spanning the full V-model.
- **Services-to-solutions pivot is the core re-rating driver.** Solutions & Products moved to ~15% of FY26 revenue and management targets >50–60% within three years, growing ~30% YoY in FY27. This shifts revenue from linear, headcount-linked billing toward licensed, outcome-based contracts — the largest determinant of KPIT's medium-term margin profile.
- **Beacon AI platform and M&A build a defensible moat.** The proprietary Beacon platform, built on 25+ years and 2,000+ production programmes, addresses validation, observability and traceability in safety-critical AI systems. ~US\$400mn of investment across Caresoft, Helm.ai, Cymotive, Technica and the Qorix JV deepens the SDV stack.
- **Deal momentum underpins visibility through the soft patch.** Seven consecutive quarters of >US\$200mn deal wins, TTM TCV of US\$1.04bn (+8% YoY) and a stable 1.46x book-to-bill floor revenue while two large SDV programmes ramp down in H1 FY27.
- **Valuation dislocation is the opportunity.** After a ~51% 12-month de-rating, KPIT trades at 12.8x trailing EV/EBITDA against a peer median of 16.8x, despite net cash and a defined path to 22–24% EBITDA margins by FY29. The market is pricing a cyclical trough as if it were structural.

Key Catalysts

- Return to sequential growth from Q3/Q4 FY27 as new deal ramp-ups offset the two large SDV programme ramp-downs.
- Solutions & Products mix crossing 20%+ of revenue, with the associated ~150bps margin uplift guided for FY28.
- China (Technica) and India each scaling toward the US\$100mn revenue milestone; US traction in trucks and off-highway.
- European OEM vendor consolidation converting KPIT's largest-ever deal pipeline into awarded TCV.

Key Risks

- Prolonged European OEM budget freeze; Europe is more than half of revenue and is the epicentre of the current downturn.
- Client concentration — T25 accounts drive the majority of revenue; the loss or ramp-down of a single large programme is material.
- AI-led cannibalisation of legacy time-and-material revenue outpacing the build-out of solutions revenue.
- Execution and integration risk across five acquisitions and the Qorix JV, which is currently loss-making at the associate line.

Key Financial Highlights

Particulars	FY22	FY23	FY24	FY25	FY26
Revenue	2,432	3,365	4,872	5,842	6,455
Revenue YoY (%)	19.0%	38.4%	44.8%	19.9%	10.5%
EBITDA	438	633	991	1,229	1,220
EBITDA (%)	18.0%	18.8%	20.3%	21.0%	18.9%
PAT	276	387	599	840	637
PAT margin (%)	11.3%	11.5%	12.3%	14.4%	9.9%
ROE (%)	22.0%	26.0%	31.0%	33.0%	20.0%

Financial Estimates Summary

Particulars	FY26A	FY27E	FY28E	FY29E
Revenue	6,455	6,778	7,320	8,198
Revenue Growth (%)	10.5%	5.0%	8.0%	12.0%
EBITDA	1,220	1,389	1,574	1,845
EBITDA Margin (%)	18.9%	20.5%	21.5%	22.5%
PAT	637	727	834	978
PAT Margin (%)	9.9%	10.7%	11.4%	11.9%
EPS (₹)	23	27	30	36
P/E (x) at CMP	25.3x	21.8x	19.6x	16.4x
EV/EBITDA (x) at CMP	12.8x	11.2x	9.9x	8.5x

KPIT Technologies is the only listed Indian pure-play automotive software partner, with effectively 100% of revenue tied to the mobility ecosystem. That singular focus is simultaneously the source of its structural advantage and of its current de-rating: the stock has fallen ~51% over twelve months as European OEMs froze engineering budgets and two large software-defined vehicle (SDV) programmes entered ramp-down. Our thesis is that the market is capitalising a cyclical trough into perpetuity, while the underlying business is executing a deliberate shift from linear engineering services to an AI-infused, solutions-and-products model that materially changes its long-term margin and revenue-quality profile.

1. The SDV Re-Platforming Is a Structural, Not Cyclical, Demand Driver

The demand case for KPIT does not rest on a top-down market-size number. It rests on a specific engineering transition already underway that a soft year of vehicle volumes cannot reverse. Vehicles are migrating from dozens of distributed electronic control units toward centralised and zonal architectures capable of over-the-air updates — a full re-platforming of the vehicle's electrical and software architecture, and the largest single work package in automotive engineering today.

Three mechanics translate that transition into outsourced revenue. **First, the software share of engineering budgets is rising.** Software already absorbs 25% or more of OEM R&D spend and has become the primary vector of brand differentiation among automakers. Legacy OEMs allocate up to 30% of R&D to software while new entrants dedicate more than 50% — a capability gap that incumbents cannot close internally at the required pace, and which outsourcing partners are structurally positioned to fill. **Second, spend is migrating from Tier-1 suppliers to OEMs themselves** as automakers take direct ownership of the software stack; KPIT derives 65–70% of revenue directly from OEMs, placing it on the receiving side of that shift. **Third, OEMs are consolidating their vendor base,** awarding larger, longer-duration programmes to suppliers with genuine end-to-end capability — a dynamic that rewards scaled specialists and eliminates staffing-model providers.

Growth within this pool is concentrated in the domains where KPIT has invested: autonomous driving and ADAS, E/E architecture and middleware, digital cockpit, connected services, cybersecurity and after-sales. Because published estimates of the addressable opportunity vary widely by definition, we anchor our forecasts to what KPIT discloses quarterly — total contract value, book-to-bill, client additions and T25 spending — rather than to a top-down market number.

The demand question for KPIT is not whether OEMs will spend on software — it is when the current budget freeze thaws. Our estimates assume H2 FY27, consistent with guidance that Q2 remains flattish and growth returns by Q4 FY27.

2. The Services-to-Solutions Pivot Is the Core Re-Rating Driver

KPIT is executing a deliberate transition away from FTE-based, time-and-material engineering toward reusable, AI-infused solutions and licensed products delivered under fixed-price and outcome-based contracts. Solutions & Products contributed ~15% of FY26 revenue; management targets in excess of 50% within three years, with our model assuming ~60% by FY29. The business is guided to grow ~30% YoY in FY27, with an associated ~150bps margin uplift in FY28 as the mix builds.

This matters more than the headline revenue number. A licensed, per-vehicle or platform-based revenue stream decouples growth from headcount, raises revenue per employee, and structurally lifts incremental margins. Fixed-price projects already represented ~62.5% of revenue, evidencing that the commercial model — not merely the marketing — has moved.

The trade-off is honest and worth stating: management has acknowledged that solutions-led delivery will cannibalise some existing time-and-material revenue. We view this as the correct strategic choice — better to cannibalise one's own linear revenue than to have a competitor or an AI toolchain do it — but it is the principal reason our FY27 organic growth estimate is only 5%.

Exhibit 2: Revenue Type Mix — FY26A vs. FY29E

Exhibit 3: FY26 Revenue Mix — Geography & Vertical

Geography: Europe / Americas / Asia & RoW Vertical: Passenger Cars / CV, Trucks & Off-Highway

3. Beacon AI Platform and the M&A Stack Build a Defensible Moat

KPIT's proprietary Beacon mobility intelligence platform — developed in partnership with Microsoft and built on 25+ years of domain experience and 2,000+ production programmes — is designed for enterprise-scale, safety-critical automotive applications. It addresses the problems that make automotive AI hard to productionise: validation, observability and traceability under functional-safety constraints. Beacon is deployed internally to lift delivery productivity and offered externally as a licensable product, with N-Dream, i-DART, Technica and Cymotive products built on top of it.

Around this sits ~US\$400mn of cumulative strategic investment across the chip-to-cloud stack.

Entity	Nature	Strategic Rationale
Caresoft Global	Acquisition (US\$191mn)	Deepens commercial-vehicle and off-highway capability; accelerates China entry; adds cost-reduction and manufacturing engineering solutions
Helm.ai	Investment	Autonomous-driving AI and perception software capability
Qorix GmbH	JV with ZF & Qualcomm	Automotive middleware stack for SDV programmes; currently loss-making at the associate line on delayed European revenue
Cymotive Technologies	Acquisition	End-to-end automotive cybersecurity; opens licensing-led revenue streams
Technica Engineering	Subsidiary	China market access and traction with Chinese OEMs; high-speed networking products

4. Deal Momentum Provides a Floor Under the Soft Patch

KPIT has recorded seven consecutive quarters of deal wins above US\$200mn. Q4 FY26 TCV of US\$349mn was the highest since Q4 FY23 and included two large strategic engagements — a >US\$50mn long-term partnership with a global off-highway equipment leader and a digital-cockpit programme with a leading Japanese Tier-1. TTM TCV stands at US\$1.04bn, up 8% YoY, with a stable 1.46x book-to-bill.

Products and solutions now represent ~21% of the overall pipeline — a useful leading indicator for the mix shift, since pipeline composition converts into revenue composition with a lag. Thirteen new clients were added in FY26.

Exhibit 4: Quarterly Deal Wins — TCV (US\$mn)

FY26 total TCV: US\$1.04bn | Book-to-bill 1.46x

Why this matters: a 1.46x book-to-bill through the worst of the European automotive downturn is the strongest available evidence that KPIT's share of a shrinking wallet is rising rather than falling. Win rates in Europe have remained stable, which is inconsistent with a competitive-displacement narrative and consistent with a budget-timing narrative.

5. T25 Wallet Share and End-to-End Programme Ownership

KPIT's top-25 strategic accounts (T25) drive the majority of revenue. Spending by this cohort is estimated to grow more than 10% in the medium term, making share retention within this base the most important operational lever for double-digit organic growth. The mechanism is end-to-end programme ownership: rather than staffing discrete work packages, KPIT takes accountability for full delivery from architecture through validation. This raises switching costs, improves revenue quality, and shifts the commercial conversation from rate cards to outcomes.

6. Adjacency Expansion — Trucks, Off-Highway and Commercial Vehicles

Passenger cars represent ~79% of revenue, leaving commercial vehicles, trucks and off-highway as a large and largely untapped adjacency. KPIT has developed a replicable playbook from a large North American engagement and is scaling offerings for autonomous and connected applications in these segments, where electronic content per unit is rising from a far lower base than in passenger cars. The thirteen client additions in FY26 across four countries — several of them truck and off-highway OEMs — indicate the playbook is transferring.

7. Geographic Diversification — US, India and China

Europe remains more than half of revenue and also holds KPIT's largest deal pipeline, as German OEMs facing Chinese competitive pressure and delayed SDV programmes seek reliable partners. The diversification story sits alongside it rather than replacing it. Management targets India and China to each exceed US\$100mn in revenue within two to three years. The China strategy is genuinely differentiated: through Technica, KPIT captures learnings from China's compressed product cycles and applies them to global OEM clients, assists global OEMs operating in China, and supports Chinese OEMs expanding abroad — a multi-directional position few Western-facing peers can replicate. In the US, new engagements are building across both passenger vehicles and off-highway equipment.

8. Margin Path to 22–24% and After-Sales as an Emerging Pillar

Management targets EBITDA margins of 22–24% by FY29, versus 18.9% delivered in FY26 and 17.2% in the trough quarter of Q1 FY27. The bridge is composed of four identifiable levers: a higher solutions and products mix (~150bps guided in FY28 alone), AI-led delivery productivity and pyramid optimisation, a greater share of fixed-price and outcome-based contracts, and SG&A leverage as revenue recovers. Our model takes a more conservative view than guidance, assuming 22.5% by FY29E rather than the upper end of the range.

Separately, after-sales solutions are emerging as a distinct growth engine as OEMs shift focus toward monetising the vehicle lifecycle rather than the point of sale. This is a structurally higher-margin, more annuity-like revenue pool than new-programme engineering, and it is one of the domains cited in KPIT's recent deal wins.

9. Near-Term Headwinds Are Transitional, Not Structural

We want to be explicit about what is currently going wrong, because the investment case depends on correctly classifying it. Q1 FY27 revenue was US\$176.8mn, up just 0.1% YoY in constant currency and down 3.6% sequentially, with EBITDA margin compressing to 17.2%. Profit fell faster than revenue on foreign-exchange losses, losses from the Qorix associate, higher subcontracting costs and acquisition-related provisions. Two large SDV programmes are ramping down through H1 FY27.

Three observations lead us to treat this as transitional. First, deal wins have not deteriorated — a 1.46x book-to-bill and stable European win rates are not what competitive loss looks like. Second, the balance sheet is unstressed: net cash of ₹900 Cr at Q1 FY27 with DSO stable at 51 days. Third, the ramp-downs are programme-completion events rather than client losses, and management has guided to sequential recovery from H2 with a return to growth by Q4 FY27.

Our FY27E revenue growth estimate of 5% deliberately sits below the historical trend and reflects a full year of the H1 drag. The valuation case does not require a rapid recovery — it requires only that FY28–29 normalise.

10. Valuation Dislocation Is the Opportunity

KPIT trades at 12.8x trailing EV/EBITDA and 25.3x trailing earnings, against a peer median of 16.8x EV/EBITDA and a peer average of 20.9x. On our FY27E estimates the multiples compress to 11.2x and 21.8x respectively. The company carries net cash, generates unlevered free cash flow of ~₹950–1,450 Cr across the forecast horizon, and has a defined, management-articulated path to a materially better margin structure. We do not argue KPIT should trade at Tata Elxsi's 25.9x or Tata Technologies' 39.4x. We argue that a business with 100% exposure to the fastest-growing pool in engineering services, a proprietary AI platform, and net cash should not trade below the peer median.

KPIT Technologies is a global partner to the automotive and mobility ecosystem, specialising in software development and integration for software-defined vehicles. The company serves OEMs, Tier-1 suppliers and other ecosystem participants worldwide, with over 11,000 employees and 51 patents in automotive software and mobility. Its stated vision — established in 2019 and central to its culture — is to reimagine mobility for a cleaner, safer and smarter world.

Unlike diversified ER&D providers, KPIT does not hedge across aerospace, rail, medical devices or industrials. Every engineer, every platform and every acquisition is pointed at one industry. That produces deeper domain credibility with OEMs and faster capability transfer across accounts, at the cost of carrying the automotive cycle undiluted — as FY26 and FY27 have demonstrated.

Exhibit 5: At a Glance	
Incorporated	1990 (Pune)
Employees	11,000+
Automotive exposure	~100%
OEM revenue share	65–70%
Patents	51
FY26 revenue	₹6,455 Cr
R&D spend	>5% of revenue
Net cash (Q1 FY27)	₹900 Cr

Core Service Domains

Domain	Scope & Relevance
Electric & Conventional Powertrains	Software for EV, hybrid, hydrogen and conventional powertrain systems
ADAS & Autonomous Driving	Driver-assistance and autonomous vehicle software; strengthened by the Helm.ai investment
Digital & Connected Vehicles	Digital cockpit, telematics and connected-vehicle platforms — a current OEM budget priority
Vehicle Networks, AUTOSAR & Middleware	E/E architecture, middleware and in-vehicle networking; core to the Qorix JV and Technica
Vehicle Engineering & Design	Next-generation full vehicle engineering services
Vehicle Diagnostics & After-Sales	Post-sale software services and lifecycle monetisation — an emerging growth pillar
Cybersecurity	In-vehicle and external automotive cybersecurity via Cymotive; licensing-led revenue potential

Business Model — Current and Evolving

KPIT is transforming from a traditional FTE-based, time-and-material engineering services model into an AI-infused, solutions- and products-led model in which it takes end-to-end ownership of complex OEM programmes. The two revenue engines today are:

- Services (~85% of FY26 revenue):** engineering services on a time-and-material or fixed-price basis, covering the full automotive software V-model from architecture through validation.
- Solutions & Products (~15% of FY26 revenue, targeted at ~60% by FY29):** reusable, AI-infused solutions, platforms and licensed products — including Beacon — delivered under fixed-price and outcome-based contracts, in some cases on a per-vehicle licence model.

Fixed-price projects already represented ~62.5% of revenue, and new markets — India, China, Southeast Asia and Africa — are being approached with a products-and-solutions-first strategy that management views as both more cost-effective for buyers and more profitable for KPIT.

Strategic Pillars

Pillar	Ambition
Deepen T25 wallet share	Grow engagement depth with the top 25 strategic OEM accounts; T25 spend growing >10%
Geographic diversification	Scale US, India and China; India and China each to exceed US\$100mn within 2–3 years
Vertical adjacency	Expand from passenger cars (~79%) into CV, trucks, off-highway and micromobility
Solutions & products pivot	>50% of revenue from solutions and products within three years, from 15% in FY26
M&A and R&D	~US\$400mn cumulative investment across the chip-to-cloud stack; R&D >5% of revenue

Client & Delivery Model

KPIT’s revenue base is anchored by its T25 strategic clients — the top 25 OEMs and Tier-1 suppliers — which drive the majority of revenues, supplemented by a widening roster of new accounts. Thirteen new clients were added in FY26 alone, spanning truck and off-highway OEMs across four countries. The delivery model is shifting from staffing discrete work packages toward end-to-end programme ownership, in which KPIT manages full delivery from architecture through validation, compressing time-to-market and absorbing programme risk on the client’s behalf. In newer markets — India, China, Southeast Asia and Africa — the company leads with products and solutions rather than services, an approach management characterises as more cost-effective for buyers and structurally more profitable for KPIT.

Days sales outstanding stood at a stable 51 days at Q1 FY27, and the company ended the quarter with net cash of ₹900 Cr — gross cash of ₹1,310 Cr offset by ₹410 Cr of acquisition-related debt. Cash conversion has remained robust through the revenue downturn, which materially reduces the financing risk attached to the ongoing transition.

ESG & Sustainability

KPIT targets net-zero status by 2050, with an interim commitment to reduce its own carbon footprint by more than 40% by 2030. It maintains an ISO 45001:2018-certified Occupational Health & Safety Management System covering approximately 83% of its India-based employee base.

The automotive ER&D and software industry encompasses all OEM and Tier-1 spending on software development, integration, validation and testing across the full vehicle stack — powertrain electrification, ADAS and autonomous driving, digital cockpit, connected-vehicle platforms, E/E architecture, cybersecurity and after-sales software. KPIT operates squarely within this space as a pure-play partner.

A Note on Market Sizing

Published estimates of the automotive software and ER&D opportunity vary by close to an order of magnitude, and the variance is definitional rather than analytical. Some series count vehicle-level electronics and software value creation; others count total OEM and Tier-1 engineering budgets; others count only the portion actually outsourced to third parties. These are not the same pool, they are not additive, and a headline number drawn from the wrong one materially overstates what is reachable by an engineering services provider.

We have therefore chosen not to anchor our forecasts to a top-down addressable-market figure. The estimates in this report are built bottom-up from KPIT's own disclosed operating metrics — total contract value, book-to-bill, client additions, revenue mix and T25 spending trajectory — which are reported quarterly, auditable against company filings, and convert into revenue on an observable lag.

What we anchor to instead	
TTM total contract value	US\$1.04bn (+8% YoY)
Book-to-bill	1.46x
Consecutive quarters >US\$200mn	7
New clients added in FY26	13
T25 client spend growth	>10%
Solutions & Products share of pipeline	~21%

Structural Growth Drivers

Driver	Mechanism and Relevance to KPIT
SDV architecture transition	Vehicles are migrating from distributed ECUs to centralised, zonal, over-the-air-updatable architectures. This is a full re-platforming, not an incremental upgrade, and it is the largest single work package in automotive engineering today.
Software share of R&D rising	Legacy OEMs allocate up to 30% of R&D to software; new entrants exceed 50%. The gap is a structural outsourcing pool.
Spend shifting OEM-ward	Software budgets are moving from Tier-1 suppliers to OEMs. KPIT's 65–70% OEM revenue mix places it on the receiving side of that migration.
Vendor consolidation	OEMs are reducing partner counts and awarding larger, longer-duration programmes to vendors with end-to-end capability — favouring scaled specialists over staffing suppliers.
Chinese cost pressure on Europe	European OEMs face Chinese competitors with faster cycles and lower cost structures, forcing both cost reduction and offshoring. KPIT positions itself as able to help reduce product costs by 30–40%.
After-sales monetisation	OEMs are shifting from point-of-sale to lifecycle economics, creating demand for diagnostics, connected services and over-the-air feature enablement.

Competitive Structure

The automotive ER&D outsourcing market is served by three distinct groups: pure-play automotive software firms (KPIT, Tata Elxsi), diversified ER&D players (LTTS, Cyient, Tata Technologies), and European engineering services firms (Alten, Bertrandt, Akka). Competition from Chinese ER&D providers is a genuine and growing threat on cost, though KPIT's domain depth, localisation capability and automotive-grade validation credentials remain differentiating.

Where KPIT Sits in the Value Chain

Automotive software value is captured at four levels, and the economics differ sharply across them. At the base sit **semiconductors and compute** (Qualcomm, NVIDIA, NXP), which are consolidating and capture high margins on scale. Above that sits the **middleware and operating-system layer** — historically fragmented, and the layer the Qorix joint venture with ZF and Qualcomm is designed to standardise. The third layer is **application and feature software**: ADAS stacks, digital cockpit, connected services, cybersecurity and diagnostics. The fourth is **integration, validation and homologation** — unglamorous, labour-intensive, and the layer where automotive-grade credentials are hardest to replicate.

KPIT's revenue today is concentrated in layers three and four, which is where outsourced ER&D spending has historically flowed. The strategic significance of the Beacon platform and the Qorix JV is that both push KPIT into layer two — reusable, licensable IP with software economics rather than services economics. This is the substance behind the solutions-and-products pivot, and it is why we regard the mix shift as a change in business model rather than a change in contract structure.

The Chinese Competitive Dynamic Cuts Both Ways

Chinese OEMs have compressed development cycles to a degree that European incumbents cannot currently match, and Chinese ER&D providers are emerging as low-cost competitors for the same programmes. For KPIT this is simultaneously a threat and the source of its most differentiated opportunity: through Technica it captures learnings from Chinese product cadence and applies them for global OEM clients, supports global OEMs operating within China, and helps Chinese OEMs expand internationally. Few Western-facing engineering partners hold a comparable multi-directional position.

The industry's near-term problem and its long-term opportunity are the same fact: European OEMs are under existential cost and speed pressure. In the short run that has frozen budgets and delayed programmes. In the medium run it forces exactly the offshoring and vendor consolidation that benefits scaled, integrated partners.

KPIT competes in a market where scale, domain depth and platform IP are increasingly decisive. The relevant comparison set spans pure-play automotive specialists, diversified ER&D providers and captive-linked engineering firms — each with a materially different exposure profile to the SDV transition.

Catalyst / Driver	KPIT Technologies	Tata Elxsi	LTTS	Tata Technologies
Automotive exposure	~100% pure-play; chip-to-cloud stack across the full V-model	~56% transportation; strong ADAS, SDV, infotainment	Diversified — mobility, sustainability, tech	~80% automotive but concentrated in Tata Motors / JLR
Solutions & products pivot	Highest focus — >50% of revenue targeted in 3 years from ~15%; ~30% YoY growth expected FY27	Design-led, AI-first pivot; OEM-focused (77% of transport vertical)	Moving toward consulting and AI implementation; AI Readiness Index with MIT Media Lab	Primarily services-led; limited disclosed mix expansion
AI-led delivery & platforms	Beacon AI platform for validation, observability and traceability; Agentic AI suite on Microsoft	DevStudio.ai GenAI platform aligned to Automotive SPICE	AgenticIQ, PLxAI, AiNexus, AiTest, AiNfonix; partnership with Anthropic	Limited disclosed differentiation on AI-led delivery
Trucks & off-highway	Active expansion; 13 new clients in FY26 across 4 countries; replicable NA playbook	Aerospace and defence prioritised; limited truck focus	Broad-based mobility recovery across aerospace, rail, trucks	Primarily passenger vehicle; limited exposure
Deal momentum	Q4 FY26 TCV US\$349mn; TTM TCV US\$1.04bn (+8%); book-to-bill 1.46x	Strategic wins with Mercedes-Benz and Suzuki	~US\$100mn TCV in Q1 FY27; multi-year transformation deals	Order visibility limited by JLR concentration
Margin trajectory	FY27 guided 20.5–21.2%; medium-term 22–24% by FY29	Best-in-class but declining; ~1,280bps off peak	EBIT margin 15.7% in Q1 FY27, +200bps YoY	Weaker operating metrics vs. peers; trajectory uncertain
Geographic diversification	Technica driving China; US growing in PV and off-highway; Europe largest pipeline	India, Japan and broader APAC opportunities	US, Europe and APAC across three segments	India and JLR-linked geographies

KPIT's Competitive Edge — Four Moats That Matter

1. Pure-play specialisation in the fastest-growing engineering pool

KPIT's exclusive mobility focus allows it to develop and deploy AI solutions calibrated to automotive constraints — functional safety, homologation, traceability — that generalist providers cannot easily replicate. Its competitive proposition is reliability and return on investment rather than lowest cost, and the deployment of AI within delivered production programmes is the practical differentiator. The corollary is undiluted cyclicality, which is precisely what the current share price reflects.

2. Beacon AI platform — proprietary technology, not repackaged tooling

Beacon is built on 25+ years of domain experience and 2,000+ production programmes and is designed for enterprise-scale, safety-critical applications. It is deployed internally for delivery productivity and offered externally as a licensable product. N-Dream, i-DART, Technica and Cymotive products are built on it. This is the mechanism by which KPIT converts domain knowledge into non-linear, repeatable revenue.

3. Early SDV leadership and design-phase engagement

KPIT engages OEMs at the architecture and design stage of next-generation vehicle programmes — the point at which switching costs are highest and the incumbent partner is hardest to displace. Programme lifecycles in automotive run several years, which converts early SDV positioning into multi-year revenue annuities. This is why stable European win rates through a demand downturn are a more informative signal than a single quarter's revenue print.

4. Cost arbitrage at the moment European OEMs need it most

European OEMs face intense cost pressure from Chinese competitors offering feature-rich vehicles at lower price points. KPIT positions itself as able to help reduce product costs by 30–40% through offshore delivery, productivity tooling and design optimisation. Combined with the ongoing consolidation of the European ER&D ecosystem, this positions KPIT as a beneficiary of exactly the cost pressure that is currently suppressing its revenue.

Porter's Five Forces

Force	Assessment for KPIT
Threat of New Entrants	Low. Automotive-grade validation credentials, functional-safety certification, Automotive SPICE process maturity and multi-year OEM qualification cycles create high entry barriers. A new entrant cannot buy 2,000+ production programmes of reference experience.
Supplier Power	Low-Medium. The primary input is engineering talent. India-based delivery scale and a 11,000+ headcount base moderate wage leverage, though specialised AI, autonomy and cybersecurity talent commands premium compensation and is genuinely scarce.
Buyer Power	High. This is KPIT's weakest force. T25 clients drive the majority of revenue, OEM procurement is professionalised and cost-focused, and the current downturn has shifted negotiating leverage decisively toward buyers. End-to-end programme ownership and platform IP are the intended offsets.
Threat of Substitutes	Medium and rising. The credible substitute is OEM insourcing combined with AI coding tools that reduce the engineering hours a programme requires. KPIT's response — moving up the stack into solutions, platforms and outcome-based contracts — is the correct one, but the transition must outrun the cannibalisation.
Competitive Rivalry	High. Tata Elxsi, LTTS, Tata Technologies, European engineering firms and increasingly Chinese ER&D providers all compete for the same programmes. KPIT's differentiation rests on automotive depth and platform IP rather than price.

Exhibit 6: Operating & Financial Metrics — Peer Set								(₹ Cr, FY26)
Company	Mkt Cap	EV	Revenue	EBITDA	EBITDA (%)	PAT	PAT (%)	Net Debt
KPIT Technologies	16,155	15,603	6,455	1,220	18.9%	637	9.9%	(552)
L&T Technology Services	37,430	34,949	11,701	2,075	17.7%	1,320	11.3%	0
Tata Technologies	34,115	33,600	5,506	853	15.5%	547	9.9%	(575)
Tata Elxsi	23,425	21,918	3,757	751	20.0%	628	16.7%	(1,506)
Cyient	9,648	8,845	7,268	967	13.3%	428	5.9%	(1,285)
Sector Average	24,155	22,983	6,937	1,173	17.1%	712	10.7%	(784)
Sector Median	23,425	21,918	6,455	967	17.7%	628	9.9%	(575)

Net debt shown in parentheses denotes a net cash position. KPIT market data as on 21-Aug-2026.

Exhibit 7: Valuation Multiples — Peer Set					
Company	P/E (x)	EV/EBITDA (x)	EV/Sales (x)	P/B (x)	ROE (%)
KPIT Technologies	25.4x	12.8x	2.4x	4.6x	20%
L&T Technology Services	28.2x	16.8x	3.0x	5.7x	21%
Tata Technologies	76.6x	39.4x	6.1x	8.7x	15%
Tata Elxsi	33.6x	25.9x	5.8x	7.7x	21%
Cyient	21.8x	9.7x	1.2x	1.7x	8%
Sector Average	37.1x	20.9x	3.7x	5.7x	17%
Sector Median	28.2x	16.8x	3.0x	5.7x	20%

Multiples computed on FY26 reported financials. We apply the sector median rather than the mean in our valuation to avoid distortion from Tata Technologies' 39.4x EV/EBITDA outlier.

The comparison that frames the investment case. KPIT delivers a higher EBITDA margin than LTTS, Tata Technologies and Cyient, an ROE matched only by LTTS and Tata Elxsi, and carries net cash — yet trades at a 24% discount to the peer median on EV/EBITDA and a 10% discount on P/E. Cyient is the only cheaper name in the set, and it does so on a 13.3% EBITDA margin and an 8% ROE. On a margin- and returns-adjusted basis, KPIT is the cheapest asset in the Indian ER&D universe.

Exhibit 9: Shareholding Pattern

Shareholding Pattern													TRADES

Source: Exchange filings. Figures in percentages.

Two features of the register merit comment. First, **domestic institutions have been the marginal buyer throughout the de-rating** — DII holding has roughly doubled from 12.25% in Sep-2023 to 23.60% in Jun-2026, absorbing almost the entirety of the FII exit from 25.69% to 13.22% over the same period. Second, **the retail base has broadened rather than capitulated**: shareholder count has risen from ~4.96 lakh to ~6.25 lakh across the period. Promoter holding has been broadly stable at ~38.6–39.5%, with the modest Jun-2026 step-down to 38.59% the only meaningful movement. We read the register as reflecting a rotation in the shareholder base rather than a loss of institutional conviction.

Exhibit 10: Revenue (₹ Cr) & YoY Growth

Exhibit 11: EBITDA (₹ Cr) & Margin (%)

Forecast Assumptions

Revenue. We model FY27E revenue of ₹6,778 Cr, up 5.0% YoY. The build assumes a soft H1 as two large SDV programmes complete their ramp-down and Q2 remains flattish, followed by sequential recovery from Q3 and a return to growth by Q4, consistent with management commentary. Growth accelerates to 8.0% in FY28E and 12.0% in FY29E as new account wins ramp, Solutions & Products compounds at ~30%, and the trucks/off-highway, US, India and China channels scale. Our FY26–FY29E revenue CAGR of 8.3% sits below management's double-digit ambition.

Margins. EBITDA margin expands from 18.9% in FY26A to 20.5% in FY27E, 21.5% in FY28E and 22.5% in FY29E. The bridge comprises the solutions and products mix shift (~150bps guided in FY28 alone), AI-led productivity and pyramid optimisation, a higher share of fixed-price contracts, and SG&A leverage. We stop at 22.5% rather than the 24% upper bound of guidance.

Income Statement (₹ Cr)				
Particulars	FY26A	FY27E	FY28E	FY29E
Revenue	6,455	6,778	7,320	8,198
COGS	97	68	73	82
Gross Profit	6,358	6,710	7,247	8,116
Operating Expenses	5,138	5,321	5,673	6,149
EBITDA	1,220	1,389	1,574	1,845
D&A	301	339	366	410

Capex (% of sales)	2.2%	2.2%	2.2%	2.1%
Net cash (₹ Cr)	962	941	1,450	1,852
Unlevered FCF (₹ Cr)	947	967	1,273	1,445

Exhibit 12: EPS Forecast (₹)

We value KPIT using a blended framework that gives equal weight to a discounted cash flow analysis and to comparable company analysis, and then probability-weights the resulting scenario outcomes. We use both because each corrects for a weakness in the other: the DCF anchors value to cash generation but is highly sensitive to terminal assumptions in a business at a cyclical trough, while comparables capture how the market is currently pricing the peer set but inherit whatever mispricing exists across the sector.

Discounted Cash Flow — Base Case			(₹ Cr)	
Particulars	FY27E	FY28E	FY29E	
EBIT	1,077	1,236	1,465	
Less: Taxes	(282)	(329)	(405)	
Add: D&A	339	366	410	
Less: CapEx	(148)	(164)	(172)	
Less: Change in NWC	(21)	144	123	
Unlevered FCF	967	1,273	1,445	
P.V. of FCF	858	1,001	1,008	
WACC	13.0%	Terminal growth rate		5.0%
Sum of P.V. of FCF	2,867	Terminal Value		13,203
P.V. of Terminal Value	9,212	TV as % of EV		76%
Enterprise Value	12,079	Add: Cash		2,227
Less: Debt	(424)	Shares O/S (Cr)		27.4
Equity Value	13,882	Implied Share Price		₹507

Terminal value represents 76% of enterprise value — a high but not unusual proportion for a business with a compressed explicit forecast window at a cyclical trough. The DCF is consequently the most conservative of our three methods and materially sensitive to the WACC and terminal growth inputs shown in the sensitivity table below.

Exhibit 13: DCF Value Bridge (₹ Cr)

Implied Valuation — Comparables		FY27E
EV/EBITDA approach		
FY27E EBITDA		1,389
Sector median EV/EBITDA		16.8x
Implied Enterprise Value		23,335
Add: Net cash		552
Implied Equity Value		23,887
Implied Price / Share		₹873
P/E approach		
FY27E EPS (₹)		27
Sector median P/E		28.2x
Implied Price / Share		₹761

DCF Sensitivity — Implied Share Price (₹)

The table below holds our explicit FY27E–FY29E free cash flow forecasts constant and flexes only the discount rate and the terminal growth assumption. The shaded cell is our base case.

WACC \ TGR	4.0%	4.5%	5.0%	5.5%	6.0%
11.0%	599	633	673	722	779
12.0%	524	549	578	612	650
13.0%	467	486	507	531	559
14.0%	422	436	452	470	491
15.0%	386	397	410	423	439

The DCF alone does not support our target price at any reasonable discount rate — it requires a WACC below ~11% to reach ₹695. This is why we weight comparables equally rather than relying on intrinsic valuation in isolation, and it is the principal reason we describe our target as offering a margin of safety rather than a stretch outcome.

Cross-Check: What the Current Price Implies

Reversing the framework is a useful discipline. At ₹589, KPIT's ₹15,603 Cr enterprise value against FY27E EBITDA of ₹1,389 Cr implies 11.2x — a multiple the market currently assigns to Cyient, a business earning a 13.3% EBITDA margin and an 8% ROE. For KPIT to be correctly priced at 11.2x, one of two things must be true: either the FY28–29E margin recovery does not happen, or the automotive ER&D pool is structurally smaller than the industry forecasts suggest. Our target does not require KPIT to re-rate to Tata Elxsi's 25.9x; it requires only that the market stop valuing the highest-margin, net-cash asset in the peer set at the multiple of the lowest-return one.

The two comparables methods and the DCF disagree by a wide margin — ₹507 against ₹761 and ₹873. That spread is itself informative: it quantifies how much of KPIT's value sits beyond the explicit forecast window, and it is the reason we blend the methods equally and probability-weight the outcome rather than anchoring to any single number.

Scenario Analysis

Parameter	Bear	Base	Bull
DCF drivers			
Revenue CAGR (FY26–29E)	6%	8%	10%
Terminal growth rate	4%	5%	6%
FCF CAGR	2%	3%	4%
WACC	14%	13%	12%
DCF implied price (₹)	436	507	783
EV/EBITDA drivers			
FY27E EBITDA (₹ Cr)	1,205	1,389	1,610
Sector median multiple	13x	17x	26x
Implied price (₹)	617	873	1,140
P/E drivers			
FY27E EPS (₹)	24	27	30
Sector median multiple	27x	28x	29x
Implied price (₹)	641	761	870
Blended target (50% DCF, 50% Comps)	532	662	894
Probability weight	10%	70%	20%

Exhibit 14: Valuation Football Field — Implied Share Price Range (₹)

Why We Are Comfortable With the Scenario Weights

We assign 70% probability to the base case, 20% to the bull and only 10% to the bear. That asymmetry is deliberate. The bear case requires a prolonged ER&D downturn, AI cannibalisation outpacing the solutions pivot *and* further multiple compression — putting KPIT at ₹436, ~26% below the current price. We regard that as possible but unlikely given a 1.46x book-to-bill, net cash, and a share price already de-rated ~51%. The base case is simply management's stated plan executed adequately rather than exceptionally.

Price Target Derivation

Bear case × 10%	53.2
Base case × 70%	463.4
Bull case × 20%	178.8
12-month Target Price	₹695.51
CMP (21-Aug-2026)	₹589
Upside	18.0%

Target implies 25.8x FY27E P/E and 13.3x FY27E EV/EBITDA — still a discount to the peer medians of 28.2x and 16.8x.

Our Estimates vs. Published Street Commentary

Metric	Ours	Street	Where we differ
FY27E revenue growth	+5.0%	~+4% YoY (US\$)	Aligned — both assume a soft H1 and a second-half inflection.
FY28E revenue growth	+8.0%	~+11%	Below. An 11% print needs the H1 FY27 ramp-downs fully replaced; we assume partial.
FY26–29E revenue CAGR	8.3%	~7% organic	Above, on acquisition contribution — not a more bullish organic view.
FY27E EBITDA margin	20.5%	Guidance 20.5–21.2%	Bottom of the range; no credit for AI productivity until it is reported.
FY29E EBITDA margin	22.5%	~22.6%; target 22–24%	Aligned, at the lower half of management's target range.
Solutions & Products mix, FY29E	~60%	~60%	Aligned. The assumption our margin path is most sensitive to.

We are not making an out-of-consensus earnings call. Our differentiation sits in the valuation conclusion, not the forecast: on estimates at or slightly below published commentary, the stock still supports 18% upside — the de-rating has outrun the downgrade cycle.

1. European OEM Demand Concentration

More than half of KPIT's revenue originates in Europe, which is currently the weakest region in global automotive. Q1 FY27 saw revenue decline 3.6% sequentially in constant currency, driven principally by European OEM budget compression. If the European engineering budget freeze extends beyond FY27 — whether from prolonged demand weakness, tariff escalation or a deeper structural retrenchment by German OEMs — our FY28–29E recovery assumptions become untenable and the bear case becomes the base case. This is the single most consequential risk to our thesis.

Mitigation: Europe is also KPIT's largest deal pipeline, and European OEMs under cost pressure have a structural incentive to increase, not reduce, offshore outsourcing. Geographic diversification into the US, India and China reduces the concentration over the medium term.

2. Client Concentration and Programme Ramp-Down Risk

T25 strategic accounts drive the majority of revenue, and the current soft patch is itself the direct consequence of two large SDV programmes entering ramp-down simultaneously. A business with this degree of client and programme concentration will periodically experience revenue air pockets that have nothing to do with competitive position. Investors should expect this volatility to recur.

Mitigation: Thirteen new clients were added in FY26 across four countries, and management is explicitly pursuing vertical and geographic adjacency to broaden the base. End-to-end programme ownership lengthens engagement duration and raises switching costs.

3. AI Cannibalisation of Legacy Revenue

The same AI capability that underpins KPIT's margin expansion story also compresses the engineering hours a given programme requires. Management has openly acknowledged that solutions-led delivery will cannibalise some existing time-and-material revenue. The investment case depends on the solutions and products business scaling faster than the legacy services base erodes. If that race is lost — or merely runs to a draw — revenue stagnates even as the mix improves, and the margin expansion arrives on a smaller base than we model.

Mitigation: Solutions & Products is guided to grow ~30% YoY in FY27 off a 15% revenue base, and now represents ~21% of the overall pipeline. KPIT is choosing to cannibalise itself rather than wait to be displaced, which we regard as the correct strategic posture.

4. Integration and Execution Risk Across the M&A Stack

KPIT has committed approximately US\$400mn across Caresoft, Helm.ai, Cymotive, Technica, N-Dream and the Qorix joint venture. Qorix is currently loss-making at the associate line on delayed European revenue and was a specific drag on Q1 FY27 profit alongside acquisition-related provisions. Acquisition-driven capability building carries integration, culture and goodwill-impairment risk, and the FY26 investing outflow of ₹1,186 Cr reflects the scale of the commitment.

Mitigation: Management characterises most transactions as EPS-accretive, and the acquisitions are capability-led rather than scale-led — each addresses an identified gap in the chip-to-cloud stack. The balance sheet remains in net cash despite the outlay.

5. Margin Delivery Below Guidance

Our model assumes EBITDA margin recovers from 17.2% in Q1 FY27 to 20.5% for FY27E and 22.5% by FY29E. This requires simultaneous delivery on four levers — mix, AI productivity, contract structure and SG&A leverage. Subcontracting costs, wage inflation in scarce AI and autonomy talent pools, and the operating deleverage inherent in a flat-revenue year all work against this. A 200bps miss versus our FY29E margin assumption reduces EBITDA by roughly ₹165 Cr and, at a 16.8x multiple, roughly ₹100 per share of comparables-derived value.

Mitigation: Management has guided FY27 EBITDA margin to 20.5–21.2%, bracketing our estimate, and has articulated a specific ~150bps mix-driven uplift for FY28. We model the lower half of the medium-term 22–24% target range.

6. Currency and Macro Sensitivity

The majority of revenue is EUR- and USD-denominated while the cost base is predominantly INR. Q1 FY27 profit was specifically impacted by foreign-exchange losses. A sharp INR appreciation, or adverse EUR/USD movement, compresses reported margins independently of operational performance. Tariff escalation affecting automotive trade flows represents a second-order macro risk that would further delay OEM programme sanctioning.

Mitigation: Natural hedging through offshore and onshore delivery mix, plus an active hedging programme. Currency effects are typically transitory and reverse across cycles.

7. Competitive Intensity, Including From Chinese Providers

Tata Elxsi, LTTS, Tata Technologies and European engineering firms compete for the same OEM programmes, and Chinese ER&D providers are emerging as a genuine low-cost threat. In a demand downturn, competition shifts from capability to price, which pressures both win rates and realised margins. Vendor consolidation is a two-sided risk: it rewards the winners disproportionately and eliminates the losers entirely.

Mitigation: European win rates have remained stable through the downturn, which is the most direct evidence available that KPIT is not losing on capability. Automotive-grade validation credentials, functional-safety expertise and localisation depth are difficult for new low-cost entrants to replicate quickly.

KPIT Technologies is a high-quality business trading through a cyclical trough that the market appears to have mistaken for a structural break. The share price has fallen approximately 51% over twelve months while the Nifty Midcap 100 has risen ~10% — a ~61 percentage point relative de-rating driven by a European OEM budget freeze and the simultaneous ramp-down of two large SDV programmes.

The evidence that this is transitional rather than terminal is reasonably clear. Deal wins have held up: seven consecutive quarters above US\$200mn, Q4 FY26 TCV of US\$349mn, TTM TCV of US\$1.04bn up 8% year-on-year, and a stable 1.46x book-to-bill. European win rates have not deteriorated. The balance sheet carries net cash of ₹900 Cr with DSO stable at 51 days. Thirteen new clients were added in FY26. None of these are the signatures of a business losing its market.

Underneath the cyclical noise, KPIT is executing the most consequential strategic transition in its history — from linear, headcount-linked engineering services to AI-infused solutions and licensed products, targeted to move from ~15% of revenue to more than 50% within three years. If delivered, this changes the character of the business: revenue decouples from headcount, incremental margins rise structurally, and the appropriate valuation multiple changes with it. The Beacon platform, ~US\$400mn of capability-led acquisitions, and a 100% automotive focus at the precise moment software becomes ~40% of vehicle value are the assets underwriting that transition.

We are not underwriting a rapid recovery. Our FY27E revenue growth estimate of 5% sits below trend and assumes a full year of the H1 drag; our FY29E EBITDA margin of 22.5% sits in the lower half of management's 22–24% target range; and our FY26–29E revenue CAGR of 8.3% is deliberately short of management's double-digit ambition. Even on those conservative inputs, the blended framework produces a target of ₹695.51.

We initiate coverage on KPIT Technologies Ltd. with a BUY rating and a 12-month target price of ₹695.51 per share, implying 18.0% upside from the current market price of ₹589. Our target is derived by probability-weighting three scenarios (70% base, 20% bull, 10% bear), each blending a DCF and a comparable-company valuation equally. The target implies 25.8x FY27E earnings and 13.3x FY27E EV/EBITDA — both still at a discount to peer medians of 28.2x and 16.8x, which we regard as an appropriate margin of safety given near-term earnings visibility remains limited.

What Would Change Our View

Signal	Implication
Upgrade to the bull case	Sequential revenue growth resuming ahead of Q4 FY27; Solutions & Products crossing 20% of revenue; first external Beacon licensing disclosure; China or India revenue approaching US\$100mn.
Downgrade to the bear case	A third large programme entering ramp-down; book-to-bill falling below 1.0x; European win rates deteriorating; FY27 EBITDA margin tracking below 19%; further goodwill or acquisition-related write-downs.

Rating Scale & Coverage History

Rating	Definition (12-month expected total return)	Date	Action	Rating	TP (₹)	CMP (₹)
BUY	Expected return greater than 15%	22-Aug-2026	Initiating Coverage	BUY	695.51	589
ACCUMULATE	Expected return between 5% and 15%					
HOLD	Expected return between -5% and 5%					
REDUCE	Expected return between -15% and -5%					
SELL	Expected return below -15%
